1991; 43:405–406

Volume 43 Subject Index

Acquisitions, relationship of managers' equity stake to takeover gains, 99–114.

Bivariate autoregressive system, as test of expectations theory of term structure, 79–85.

Bond portfolios, exhange risk and international diversification in, 287–307.

Borrowing, international diversification of, and foreign exchange market liberalization, 309–327.

Bureau of Economic Analysis, stochastic nature of early estimates of GNP, 231–239.

BVAR, see Bivariate autoregressive system.

Cash flows, future, earnings reports and dividends as two main sources of information concerning, 197–214.

Common orthogonalization, invariance of results under, 193–196.

Common stock returns, information effects of earnings and dividend announcements on, 179–192.

Competitive environment, competetive, optimal timing of project initiation in, 143–156.

Contracts, forward exchange, and incomplete information, 339–352.

Diversification, international
and hedging, 363–374.
in bond and equity portfolios, 287–307.

Dividend announcements, information effects of on common stock returns, 179–192.

Dividend policy corporate,
and partial adjustment model, 165–178
determination of, and earnings information, 197–214.

Dominant banks, market power of and out-of-market productive capacity, 215–229.

Earnings, information effects of on common stock returns, 179–192.

Earnings information, and determination of dividend policy, 197–214.

Economists, ranking of journals, 265–270.

Education, expenditures, effect on employment changes, 69–77.

Employment changes, effect of education expenditures on, 69–77.

Energy price change, direct and indirect effects, 115–132.

Energy shock, reading effects of in financial markets, 115–132.

Equity portfolios, exchange risk and international diversification in, 287–307.

Exchange controls, logit methodology for predicting imposition of, 389–401.

Exchange rate
devaluation, and labor-exporting economy, 157–164.
effect on international fixed-income portfolios, 375–388.

Exchange risk, in bond and equity portfolios, 287–307.

Expectations theory, term structure, 79–85.

Federal Reserve district directors, 271–282.

Financial equilibrium, and tax evasion, 25–32.

Fisher effect, changes in 1980s, 59–68.

Foreign exchange market liberalization, and international diversification of borrowing, 309–327.

Forward exchange contracts, and incomplete information, 339–352.

Gross national product, stochastic nature of BEA's early estimates, 231–239.

Hedging, and international diversification, 363–374.

Income, underreporting, 25–32.

Information, incomplete, and forward exchange contracts, 339–352.

Interest rate risk, effect on international fixed-income portfolios, 375–388.

Interest
nominal rate, Fisher effect, 59–68.
rates, term structure of, 133–142.

Journals, ranking of by economists, 165–170.

0148–6195/91/$03.50

Labor-exporting economy, and migration, 157–164.

Lintner's partial adjustment model, and corporate dividend policy 165–178.

Logit methodology, for predicting imposition of exchange controls, 389–401.

Managers' equity stake, relationship of to takeover gains, 99–114.

Market interest rates, relationship with number of MMMF offered, 153–163.

Market model, comparison with SRCM using mergers as an event, 87–93.

Market pricing, option pricing model of mortgage-backed securities as good indicator of, 37–47.

Migration, and labor-exporting economy, 157–164.

MMMF, see Money market mutual funds.

Monetary deregulation, and sensitivity of nominal interest rates to inflation, 59–68.

Money market mutual funds
depository disintermediation and the equilibrium quantity, 253–263.
relationship with market interest rates, 153–163.

Money supply announcements, unexpected, retrospective, 1–23.

Mortgage-backed securities, empirical test of option pricing model, 37–47.

Oil price change, dynamics response to, 115–132.

Option pricing model
mortgage-backed securities, empirical test, 37–47
superiority over static pricing models, 37–47.

Orthogonalization, common, invariance of results under, 193–196.

Out-of-market productive capacity, and market power of dominant banks, 215–229.

Partial adjustment model, and corporate dividend policy, 165–178.

Portfolio risk reduction, relationship between interest rate and currency risk and their cumulative effect, 375–388.

Portfolios, international fixed-income, effect of exchange rate and interest rate risk on, 375–388.

Preemptive competitive environment, optimal timing of project initiation in, 143–156.

Productive capacity, out-of-market, and market power of dominant banks, 215–229.

Project initation, optimal timing of in preemptive competitive environment, 143–156.

Risk reduction, through diversification, Japan and U.S., 363–374.

Schooling attainment, effect on employment changes, 69–77.

SCPE, see Standardized cumulative prediction error.

SRCM, see Swamy's random coefficient regression model.

Standardized cumulative prediction error test statistic, sensitivity of, 49–57.

Stock prices, common stochastic trends in world stock exchanges 1975–1990, 329–338.

Swamy's random coefficient regression model, comparison with market model using mergers as an event, 87–93.

Takeover gains, relationship to managers' equity stake in acquiring firm, 99–114.

Tax evasion, and financial equilibrium, 25–32.

Term premia, factors influencing, 133–142.

Term Structure
expectations theory, 79–85.
of interest rates, 133–142.

Tobin's q and measurement error, 241–252.

Treasury

Treasury-bill rates, effects of money supply announcements on over different periods, 1–23.

Treasury-bond rates, effects of money supply announcements on over different periods, 1–23.

World stock exchanges
globalization of, 329–338.
system of stock prices, stochastic trends for 1975–1990, 329–338.

Yield curve, effect of unexpected money supply announcements, 1–23.
